Disclaimer

Contents of operating instructions

These operating instructions have been created with care. However, ebm-papst assumes no liability for the status, correctness, completeness, or quality of the information provided. Liability claims towards ebm-papst which relate to damage of a material or non-material nature which was caused by use or non-use of the information presented or by the use of incorrect and incomplete information are categorically excluded insofar as there is no evidence of deliberate or grossly negligent culpability on the part of ebm-papst.

Responsibility for documentation

ebm-papst UK Ltd Chelmsford Business Park, Chelmsford, Essex CM2 5EZ, UK

Copyright

ebm-papst UK Ltd Chelmsford Business Park, Chelmsford, Essex CM2 5EZ, UK

ebm-papst has sole copyright. Duplicating this document or using it without the express consent of the author is prohibited.

Availability of operating instructions

The operating instructions must be available to the user at all times, to ensure the device is used safely. They must be kept at an easily accessible location at the place of installation, where they can be viewed at all times, or incorporated in overall product documentation where this product has been integrated.

Application

When using this device, it is essential that the safety regulations and the relevant operating instructions are observed. Read these operating instructions carefully before you start working with the device. Observe the hazard and warning notices to avoid the risk of injury or malfunctioning.

Subject to change.

1 Downloads and Other Documentation – READ THIS FIRST

Read the TMS OMI for general TMS information, 210-OMI12093, before reading this document, download link below:

http://ebmpapst.com/omi-tms-12093-uk

For information on the TMS Configuration Interface refer to documents:

TMS Text based user interface: 210-OMI13963 TMS GUI Graphical User Interface: 210-OMI13962

For information on the TMS Modbus interface refer to 210-OMI14013 (this document).

For Installation information refer to TMS Installation Instructions 210-OMI13192

For information on the TMS development kit refer to 210-OMI13191

These documents and GUI software may be downloaded from: http://ebmpapst.co.uk/instructions

For fan data including essential safety information refer to the datasheets for any connected fans.

2 Introduction

2.1 Foreword

These operating instructions outline the application possibilities, installation, operation, and programming of the device described on the title page.

When installing and operating the device, all the safety information listed in Chapter 3 must be adhered to. If used in other countries, local laws, guidelines, and regulations apply.

Read these operating instructions carefully before you start working with the device. Observe the following waming notices in order to avoid risk of injury or malfunction of the control electronics.

2.2 Target group

These operating instructions are only intended for skilled persons.

2.3 Written styles

4

In these operating instructions, the meaning of certain sections is indicated through various means. Descriptive text is shown without a preceding symbol.

• Text preceded by a dot (•) indicates a list introduced by a heading.

Underlined blue text indicates a cross reference, which can be clicked on in the PDF document. Upon doing so, the screen will jump to the relevant section of the document.

2.4 Warning notices and notices

Warning notices and notices are always shown before an instruction where carrying out the action could result in a hazard or material damage.

Important - See separate fan documentation for fan safety requirements.

In this documentation, the following warning notices are used:

→ Hazard

- → This notice indicates a hazard with a high level of risk that will directly result in death or severe bodily injury if it is not avoided.
- → The arrow(s) highlight corresponding precautionary measures to prevent the hazard.

DANGER

Hazard

This notice indicates a hazard with a moderate level of risk that may possibly result in death or severe bodily injury if it is not avoided.

WARNING

→ The arrow(s) highlight corresponding precautionary measures to prevent the hazard.

Hazard

This notice indicates a hazard with a low level of risk that may result in light or moderate bodily injury and material damage if it is not avoided.

CAUTION

→ The arrow(s) highlight corresponding precautionary measures to prevent the hazard.

Notices contain information that is particularly important at the relevant point or make the operating steps described easier. They are emphasized as follows:

NOTICE

This notice provides you with recommendations for use and helpful tips.

3 Safety Information

Important - See separate fan documentation for fan safety requirements.

The device has been developed based on engineering principles, as well as recognized guidelines for the safety and protection of users.

Read these operating instructions carefully before starting work on the device. Observe the following warnings to prevent malfunctions or danger to persons

These operating instructions are to be regarded as part of the device. The device is only to be sold or passed on together with the operating instructions. These operating instructions may be duplicated and distributed to inform about potential dangers and their prevention.

3.1 General safety information

Always observe the following safety information, regardless of the specific operating conditions:

- → Before you start working with the device, switch it off and isolate
- → Do not modify or fit any attachments without approval from ebm-papst.
- → Commissioning may only take place following full verification of compliance with all relevant legal requirements, guidelines, and application-related safety regulations.

- → The safety hazards associated with the device must be reassessed following installation in the end application.
- → Keep the workplace clean and tidy.

3.2 Personnel qualifications

The following qualification requirements are specified in these operating instructions:

- → Skilled person: person with relevant education and experience to enable him or her to analyse risks and avoid hazard. (source: EN 50110-1:2013 modified)
- → Instructed person: person adequately advised by a *skilled person* to enable him or her to avoid dangers. (source: EN50110-1:2013 modified)

Required skills and knowledge				
Tasks and activities	Required skills and knowledge			
Installation	 Practical electrical training Knowledge of the current electrical safety regulations Knowledge of the relevant electrical safety regulations at the workplace 			
Configuration	 Basic knowledge of the structure and set-up of the described connections and interfaces Basic knowledge of data transfer 			
Servicing	 Practical technical training Knowledge of the relevant electrical safety regulations at the workplace 			

- → Only skilled persons are allowed to install the device, carry out the trial run and perform work on the electrical system.
- → Only instructed persons are allowed to transport, unpack, operate and service the device.

3.3 Electrical and electromagnetic safety

Risk of electric shock

→ The controller must be powered from a SELV (safety extra-low voltage) supply.

DANGER

Connected fans can start automatically at any time

Risk of injury

6

- → Keep out of the fan's danger zone
- → When working on a connected fan, isolate from the supply and ensure it cannot be switched back on
- \rightarrow Wait until the fan comes to a stop
- → After working on the fan, remove any tools or other objects from the device.
- → Regularly check the device and connected cables for damage.
- → Only use cables and plug connections approved by ebm-papst.
- → Immediately replace defective cables and loose connections.

- → Ensure EMC capability in the end device/application/installation, e.g., with shielding.
- → Provide suitable measures for avoiding impermissible electromagnetic interference emissions, such as shielding.

3.4 Intended use

This device is intended solely for industrial use in other products and machines. The device is exclusively designed as a built-in device. Any other usage above and beyond this does not conform with the intended purpose and constitutes misuse of the device. The equipment into which this is integrated must be capable of withstanding the mechanical and thermal stresses that can arise from this product. This applies for the entire service life of the equipment in which this device is installed.

- Using the device only in power systems with grounded neutral (TN/TT power systems)
- The device is to be used in networks with network quality characteristics as per EN 50160
- Using the device only in stationary systems
- Performing all maintenance work
- Using the device within the permitted ambient temperature range; see
 - transport and storage
 - o nominal data
- Operating the device with all protective devices
- Following the operating instructions

3.5 Improper use

Using the device in the following ways is prohibited and can be hazardous:

- Operation of the device in technical applications for which there are special requirements with regard to safeguarding against failure, for example
 - Operation in aircraft or spacecraft.
 - Operation in railway vehicles, motor vehicles, and ships.
 - o Operation in potentially explosive atmospheres (explosion protection area).
 - o Operation in medical equipment with a life-sustaining or life-support function.
 - Use as a safety component or to perform safety-related functions.
- Unfastening of connections (e.g., screws) during operation
- Operation with disassembled or manipulated protective devices
- Painting the device
- All other applications not listed as intended uses.

3.6 Conversions and modifications

Only operate the device in its original and faultless condition. Retrofitting, modifying, and converting is strictly prohibited. Any modifications you wish to make must always be agreed with ebm-papst first.

ebm-papst is not liable for any conversions and modifications carried out which have not been expressly approved by us. This also includes any damage resulting from the use of non-original parts or through operating the device outside of the agreed parameters.

3.7 Transport and storage

→ Always transport the device with care and in its original packaging.

CAUTION

 Store the device, partially or fully assembled, in a dry place, protected against the weather and free from vibration, in the original packaging in a clean environment. Even devices explicitly intended for outdoor use

- Protected from environmental influences and dirt until final installation.
- It is recommend storing the device for no longer than one year in order to guarantee trouble-free operation and the longest possible service life.
- If the device is stored for an extended period, it must be connected and started at least every year.

Maximum permitted temperature (°C)	+70
Minimum permitted temperature (°C)	-40

4 Technical Data

4.1 Summary

This Thermal Management System (TMS) controller sets the speed of up to four fans, based on e.g. temperature. It is designed for use with four wire type fans (Power, 0V, Speed control, Tachometer) on 12V, 24V or 48V systems. It can also be used with mains powered EC fans if a separate power supply is provided to the TMS.

- Each fan may be configured for a different speed/temperature profile.
- 0-10V or Open Collector speed-controlled type fans.
- Open Collector Tachometer, Open Collector Alarm or Relay Alarm type fans.
- Configurable Alarm actions (fan speed change, Alarm relays operate)
- Customer configurable or may be supplied programmed to required profile.
- Open Loop or Closed Loop control configurable option, Thermistor or 0-10V inputs.
- RS485 Modbus RTU interface.

4.2 Description

4.2.1 DC Supply

- Supply Voltage covers 12V, 24V and 48V ranges (11-57 VDC) SELV
- Supply reversal protection for controller circuitry.
- Earthing no part of the controller or fan circuit is connected to Chassis/Earth.
- Suitable for use on positive or negative earth (-48VDC) systems.
- Green Power LED will pulse slowly when power connected.
- The Modbus interface is not isolated

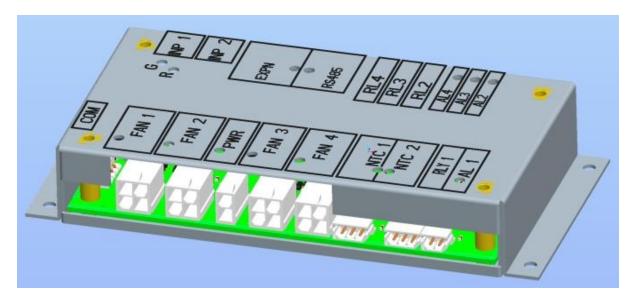

4.2.2 Use with -48VDC supply

→ The RS485 Modbus interface is not isolated. Use caution especially on -48V systems. An isolated RS485 repeater may be necessary, especially on -48V systems.

CAUTION

4.3 Product drawing

4.4 Nominal data

Part number	TMSB00000-01	
Nominal voltage (V DC)	12, 24, 48	
Voltage range (V DC)	11-57	
Frequency (Hz)	DC operation only	
Inputs	Two off NTC Thermistor / 0-10V Inputs, two Switch inputs	
Outputs	Four off 0-100% PWM, four off Alarm relays	
Nominal power consumption (W)	0.5W	
Nominal current (mA) TMS only	25mAmax for controller only, typical 10mA running.	
Nominal current (A) including fans	11A max steady state total current including fan supply	
Power Cable and Power Connector	8A maximum using 20AWG wire & Crimp Molex 39-00-0038	
	11A maximum using 16AWG wire & Crimp Molex 0457503112	
Minimum ambient temperature (°C)	-40	
Maximum ambient temperature (°C)	+70	
Modbus Interface	RS485 Modbus RTU	

5 Modbus Interface

Refer to https://modbus.org/ for full definition of Modbus RTU communications protocol standard.

5.1 TMS Software Version for Modbus Support

Modbus operation as defined in this document is supported by TMS software version 1.0.99 or later.

The software version may be determined from:

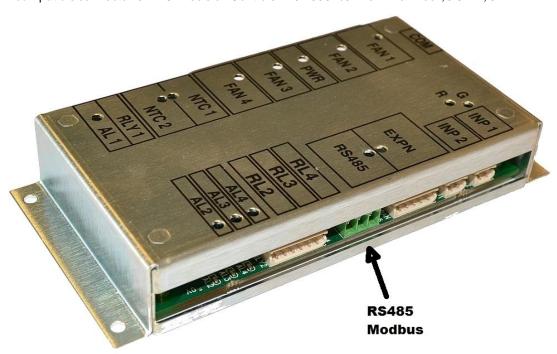

- 1) The identification label on the rear of the PCB.
- 2) The Terminal interface powerup message.
- 3) Modbus registers see tables below.

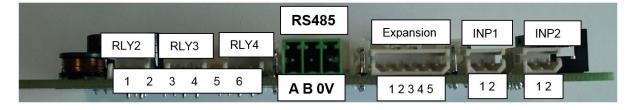

5.2 RS485 Modbus Connection

Connect to RS485 connector, pins A, B and 0V, see below.

Note: If the RS485 Modbus 0V reference connection is not made then Modbus communication may be unreliable or may become unreliable.

A compatible connector is: IMO Precision Controls - 20.1550M/3 - Terminal Block, 3.5MM, 3WAY

5.3 Modbus Interface Factory settings

Factory settings made for the device by ebm-papst, Modbus RS485.

RS485 Modbus	Default
RS485 Modbus Network Address	1
RS485 Modbus Baud	19200
RS485 Modbus Parity	Even

Factory settings made for the device by ebm-papst, loT data identification.

RS485 Modbus	Default
Customer Number	1
Site Number	1
Building Number	999
Unit Number	1

5.4 Modbus Interface Configuration

For TMS GUI Software version 2.3.1 or later, use the TMS GUI software to configure the parameters stated below. Instructions for use can be found in the TMS GUI interface guide (210-OMI11362). Note that updated TMS software is required for TMS GUI Modbus configuration to work without the restart of the TMS.

For TMS GUI Software version 2.3.0 or earlier, use the TMS Terminal Interface (text-based interface) to configure these parameters. Terminal Interface operation is shown below:

Press [r] for RS485 Modbus menu

```
Modbus Configuration menu
"a" to Change the Modbus Address, now=1
"r" to change BaudRate 9600/19200, now=Baud=19200,
"P" to change Parity, None/Even/Odd now=Parity=Even
"c" to Change the Customer Number, now=1
"s" to Change the Site Number, now=1
"b" to Change the Building Number, now=999
"u" to Change the Unit Number, now=1
"d" to Display all Modbus Holding Registers
```

The Customer Number, Site Number, Building Number and Unit Number may be set to allow e.g. a Building Management Unit or IoT (Internet of Things) monitoring system to identify a TMS on the Modbus network.

The command "d", "Display all Modbus Holding Registers" displays the data that would be read by the Modbus interface, for all Holding Registers.

5.5 Modbus Register Functions

5.5.1 Modbus Supported Function Codes

Function Code Value (Decimal)	Description	Quantity of Registers affected
03	Read Holding Register	single or multiple
04	Read Input Register	single or multiple

All TMS Modbus registers are Holding Registers.

Input Register reads will be treated as Holding Register reads

Other Function Code Read or Write attempts will be rejected and an Exception Code returned.

5.5.2 Modbus Exception Codes

Function Code Received	Register Address	Exception Code returned
0x01, Read Coil	All	0x81
0x02, Read Discrete Input	All	0x82
0x03, Read Holding Register	Illegal Address	0x83
0x04, Read Input Register	Illegal Address	0x84

0x05, Write Single Coil	All	0x85
0x06, Write Single Register	All	0x86
0x0F, Write multiple coils	All	0x8F
0x10, Write Multiple Registers	All	0x90

5.5.3 Modbus TMS Read and Response Message Example

Example of a valid message

Note: all data shown in Hexadecimal form

BMS message to TMS: 01 03 00 68 00 01 05 d6 TMS response to BMS: 01 03 02 04 29 7b 5a

BMS message to TMS explanation:

- 01 TMS Modbus Address
- 03 Function Code "Holding Register Read"
- 00 Register Address, high order bits of 16-bit value
- 68 Register Address, low order bits of 16-bit value
- 00 Quantity of Registers to read, high order bits of 16-bit value
- 01 Quantity of Registers to read, low order bits of 16-bit value
- 05 Checksum, high order bits of 16-bit value
- D6 Checksum, low order bits of 16-bit value

TMS response to BMS explanation:

- 01 TMS Modbus Address
- 03 Function Code "Holding Register Read"
- 02 The number of data bytes to follow (two bytes for each register)
- 04 Contents of register, high order bits of 16-bit value
- 29 Contents of register, low order bits of 16-bit value
- 7ь Checksum, high order bits of 16-bit value
- 5a Checksum, low order bits of 16-bit value

Summary:

Read TMS single Holding Register Address 68 Hex (104 Decimal), response shows that the register contains 429 Hex (1065 Decimal).

5.6 Modbus Register Addresses

5.6.1 System Design and Configurable Settings Registers

System Design and Configurable Settings:

Address (HEX)	Address (DEC)	Name	Default (Decimal)	Notes. (Numbers shown are Decimal)
,	, ,		,	,
64	100	Customer ID	1	Configurable, for identification of source of IoT data. For TMS GUI Software version 2.3.1 or later, use GUI Interface
65	101	Site Number	1	to configure these parameters. For TMS GUI Software version 2.3.0 or earlier, use Terminal
66	102	Building Number	999	Interface to configure these parameters
67	103	Unit Number	1	
68	104	Device ID	1065	The digits of the TMS part number CN1065.
69	105	Number of System Design Data and Configurable Parameters	118	Number of registers in this section
6A	106	Number of Controller Output signals and parameters	14	Number of Controller Outputs (PWM, 0-10V, Alarms) and Calculated parameters (Uptime, etc)
3/1	100	orginal out a parameters		Suramotoro (Opimo, Oto)
		North and David III		
6B	107	Number of Power Up Parameters	10	e.g. Firmware issue, build date

			Default	
Address (HEX)	Address (DEC)	Name	(Decimal)	Notes. (Numbers shown are Decimal)
6C	108	Number of Configurable Fans	4	The TMS is a Four Fan controller – fewer fans may be fitted for an application.
6D	109	Number of Parameters/Fan	3	Fan Fitted, RPM and Alarm
6E	110	Number of Sensors (Inputs)	5	Two off NTC/0-10V, supply volts, two off Switches
6F	111	Number of Parameters/Sensor	1	Temperature_x10 or 0-10V I/P level, 0-1023, Supply Voltage
70	112	Number of Output-Modules	6	Separate Alarms.
71	113	Number of Parameters/Output-Module	19	Each TMS Alarm has this number of configurable parameters.
72	114	Max. consecutive Modbus registers read/write	14	14, fixed
73	115	TMS Modbus Response Timeout, ms	1000	1000ms, fixed

Address (HEX)	Address (DEC)	Name	Default (Decimal)	Notes. (Numbers shown are Decimal)
74	116	BMS write enabled	0	set to 0 For TMS, Holding Registers not write enabled
BOVE are System D	Design Parameters,f	ixed or set at Commissionin	g. BELOW are Config	-
75	117	Operating Mode	1	1 = default, "Temperature sets PWM Output" 2 = "Temperature sets Fan RPM" 3 = "0-10V input sets PWM Output" 4 = "0-10V input sets Fan RPM"
76	118	Dummy Links	0 (Not Enabled)	0 or 1, For "Fan provisioned but not fitted" function.
77	119	Daily Fan Run	0 (Not Enabled)	0 or 1, Disabled / Enabled
78	120	PWM Frequency, kHz	2	Default 2kHz, max 25kHz. If set higher, this gives lower PWN resolution
79	121	Virtual Alarms Enabled	0 (Not Enabled)	If "Virtual Alarms Enabled" then there are 6 total Alarms available for alarm logic, otherwise 4
7A	122	Fan1 used	1 (Fan Used)	Start of Fan Data Configuration
7B	123	Fan2 used	1 (Fan Used)	0 or 1, 0 = Unused
7C	124	Fan3 used	1 (Fan Used)	
7D	125	Fan4 used	1 (Fan Used)	
7E	126	Fan1 Pulses/Rev	2	Tachometer Pulses per Revolution
7F	127	Fan2 Pulses/Rev	2

D2	210	Fan1_P7	30	
D3	211	Fan2_P7	30	
D4	212	Fan3_P7	30	
D5	213	Fan4_P7	30	
D6	214	Fan1_P_max	90	O/C or 0-10V PWM% Output at top of proportional band for Open Loop Modes, or RPM for Closed Loop Modes
D7	215	Fan2_P_max	90	
D8	216	Fan3_P_max	90	
D9	217	Fan4_P_max	90	

5.6.2 Power-Up Data Registers

Register Address (HEX)	(DEC)	Parameter	Notes (Numbers shown are Decimal)
FA	250	Controller part number	1065
FB	251	Firmware part number	11016
FC	252	Firmware Issue	Example: 1099 register contents for s/w Issue 1.0.99
FD	253	Microcontroller RCON Register Content	Cause of program restart, e.g. Power Cycle, Software Watchdog, etc
FE	254	Firmware build year 4 digits	
FF	255	Firmware build month 1-12	
100	256	Firmware build day 1-31	
101	257	Firmware build hour 0-23	
102	258	Firmware build minute 0-59	
103	259	Firmware build second 0-59	

5.6.3 Controller Output signals and parameters Registers

Register Address (HEX)	(DEC)	Parameter	Notes (Numbers shown are Decimal)
12C	300	Configuration Changed	Configuration data changed flag
12D	301	Controller Uptime, top 16 bits of 32bit unsigned integer.	(Decrease = Restart flag)
12E	302	Controller Uptime, lower 16 bits of 32bit unsigned integer.	(Decrease = Restart flag)
12F	303	Logging or BMS Status	Logging or BMS Status - written by BMS / MIU (future use)
130	304	pwm_output_0_1000,Fan1	50%PWM output level shown as 500
131	305	pwm_output_0_1000,Fan2	
132	306	pwm_output_0_1000,Fan3	
133	307	pwm_output_0_1000,Fan4	
134	308	Alarm1 Active	1=Active, 0=Inactive
135	309	Alarm2 Active	0 or 1
136	310	Alarm3 Active	0 or 1
137	311	Alarm4 Active	0 or 1
138	312	Alarm5 Active	1=Active, 0=Inactive, if 5 & 6 enabled
139	313	Alarm6 Active	0 or 1

5.6.4 Fan Data Registers

Register Address (HEX)	(DEC)		Parameter	Notes (Numbers shown are Decimal)
CB00	51968	Fan 1	RPM	Fan 1 RPM
CB01	51969	Fan 2	RPM	Fan 2 RPM
CB02	51970	Fan 3	RPM	Fan 3 RPM
CB03	51971	Fan 4	RPM	Fan 4 RPM
CB04	51972	Fan 1	Alarm	0=Fan-Alarm-Inactive, 1= Fan-Alarm-Active

Register Address (HEX)	(DEC)		Parameter	Notes (Numbers shown are Decimal)
CB05	51973	Fan 2	Alarm	0 or 1
CB06	51974	Fan 3	Alarm	0 or 1
CB07	51975	Fan 4	Alarm	0 or 1
CB08	51976	Fan 1	Linkfitted	Dummy-Fan link if found, 0=No-Link, 1=Link-Detected
CB09	51977	Fan 2	Linkfitted	0 or 1
CB0A	51978	Fan 3	Linkfitted	0 or 1
CB0B	51979	Fan 4	Linkfitted	0 or 1

5.6.5 Sensor Data Registers

Register Address (HEX)	(DEC)		Notes (Numbers shown are Decimal)
FD00	64768	Sensor 1	NTC 1 Temperaturex10, OR 0-10V_IP1x10, dependent on Mode setting above
FD01	64769	Sensor 2	NTC 2 Temperaturex10, OR 0-10V_IP2x10, dependent on Mode setting above
FD02	64770	Sensor 3	Switch Input 1, 0=Open, 1=Closed
FD03	64771	Sensor 4	Switch Input 2
FD04	64772	Sensor 5	Supply Voltsx10

5.6.6 Alarm Configuration Registers

Default:

- 1) All alarm inputs ignored by default, no TMS alarm actions. User to configure any alarm inputs to trigger TMS Alarm action, where required for the application.
- 2) Alarms 5 and 6 (Virtual Alarms for additional Alarm Logic) not enabled by default.

Register Address (HEX)	Register Address (DEC)	TMS Alarm 1-6	Alarm Parameter 1-19	Parameter State for Alarm Input: Trigger Alarm or Ignored. Numbers shown are Decimal
FE80	65152	Alarm1	1	Switch Input 1, Trigger Hi=1, Trigger Low=0, Ignored=65365

Register Address (HEX)	Register Address (DEC)	TMS Alarm 1-6	Alarm Parameter 1-19	Parameter State for Alarm Input: Trigger Alarm or Ignored. Numbers shown are Decimal
FE81	65153	Alarm2	1	Switch Input 1
FE82	65154	Alarm3	1	Switch Input 1
FE83	65155	Alarm4	1	Switch Input 1
FE84	65156	Alarm5	1	Switch Input 1
FE85	65157	Alarm6	1	Switch Input 1
FE86	65158	Alarm1	2	Switch Input 2, Trigger Hi=1, Trigger Low=0, Ignored=65365
FE87	65159	Alarm2	2	Switch Input 2

6 Maintenance, malfunctions, possible causes and remedies

Do not perform any repairs on your device. Send the device to ebm-papst for repair or replacement.

If control voltage or a stored speed set value is applied, fans will restart automatically, e.g., after a power failure.

WARNING

Risk of injury

- → Keep out of any connected fan's danger zone.
 - → When working on the device, switch off the supply voltage and ensure that it cannot be switched back on.
 - → Wait until any connected fans come to a stop.
 - → After working on the device, remove any tools or other objects from the device.

Malfunction/fault	Possible cause	Possible remedy
TMS not responding to Modbus Holding Register read attempt from PC	Incorrect PC Port assignment or RS485 interface driver.	Check settings and correct if necessary. Check operation using another RS485 Modbus node.
TMS not responding to Modbus Holding Register read attempt from BMS	BMS not configured for RS485 Modbus RTU.	Check settings and correct if necessary. Check operation using another RS485 Modbus node.
TMS not responding to Modbus Holding Register read attempt	Incorrect Modbus Address, Baud Rate or Parity setting	Check settings and correct if necessary
TMS not responding to Modbus Holding Register read attempt	Modbus address already assigned to another node.	Ensure all nodes have unique Modbus address assigned.
TMS not responding to Modbus Holding Register read attempt, or Intermittent operation.	Incorrect RS485 Modbus connector wiring	Check connections and correct if necessary
TMS not responding to Modbus Holding Register read attempt, or Intermittent operation.	No 0V (Ground) reference connection, signal outside Common Mode Range of RS485 receiver (-7V to +12V)	Add 0V (Ground) reference connection to all nodes in the system.
TMS not responding to Modbus Holding Register read attempt, or Intermittent operation.	Unsuitable data cable.	For optimum performance, twisted pair cable should be used, screened if the environment has a high level of electrical interference.
TMS not responding to Modbus Holding Register read attempt, or Intermittent operation.	Incorrect transmission line termination.	For optimum performance, the two ends of the wiring route should each be fitted with a termination resistance equal to the characteristic impedance of the cable used.
TMS not responding to Modbus Holding Register read attempt, or Intermittent operation.	Poor wiring layout plan	For optimum performance, wiring should be a single route from first node to final node, with minimal stubs and no loops or stars. Keep data cable away from mains cable
TMS not responding to Modbus Holding Register read attempt, or Intermittent operation.	BMS timeout set too short	Allow up to 1s for TMS response
TMS not responding to Modbus Holding Register read attempt, or Intermittent operation.	BMS polling speed set too high	Set BMS to maximum individual TMS repeated read rate of 1s.
